DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 8-14 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claimed subject matter is directed toward a computer program product comprising a computer usable medium having program code embodied in the medium. A review of the specification, page 6, lines 10-15 detail that a computer usable medium includes computer usable signals. Computer usable signals do not constitute any of the statutory categories of invention as disclosed in M.P.E.P. 2106. Signals are not method claims and have no physical (concrete) components (materials) to constitute an apparatus, i.e. machine or article of manufacture. Signals are not composition of matters also because there are no substances being combined. It appears that the intended use of a signal is what is attempting to make the program product statutory. However, an intended use of a claim which does not provide any distinct definition of any of the claimed invention's limitations is not considered a limitation and is of no significance to claim construction (see M.P.E.P. 2111.01). Therefore, the intended use of a computer system has no patentable weight and cannot be used to make a claim statutory. In addition, program code is intended to be executed and therefore the clause of "being operable at a manager" is another intended use. Applicant can alleviate this rejection by amendment the specification to distinguish

the difference between storage mediums and transmission mediums and amend the claims from a computer usable medium to a computer storage medium.

Allowable Subject Matter

2. Claims 1-7 and 15-19 are allowed.
